

Block & Inline Elements

The majority of HTML elements are defined as *block level* elements or as *inline elements*.

Block Level Element

Block level elements take up a whole line in the browser, from edge to edge. Like this:

Block level element

Block Level Element

Here are some examples of block level elements:

```
<h1>, <p>, <ul>, <table>
```

Inline Elements

Inline elements don't take up a whole line by default,
kind of like this:

Inline element

Inline Elements

Here are some examples of inline elements:

`<a>`, ``, ``
